

The associations interlock through one shared member at a time

Two bodies are tied when at least one person belongs to both. 499 bodies carry 1289 such ties, and the largest component holds 381 of them. Only 28 of those ties rest on more than a single shared person, and none on more than three — this is an elite joined by individuals holding two posts, not by institutions with overlapping benches. The 7 bodies with the most interlocks are named.
