

The brokers are not all Europeans

Largest component of the co-membership projection: 745 people, 4928 ties, area linear in betweenness.

Colour is the community the entry's own evidence settles, which it does for 246 of these 745 people (33%) — the grey majority are named only inside someone else's entry and have no notice to code. Among those coded, mean betweenness is 0.0133 for Tunisians against 0.0078 for Europeans. The 10 highest that could be labelled clear are named.

- Community not settled by the entry (499)
- European (192)
- Tunisian (54)
