

Tunisian notables sit inside the network, not on its rim

The same largest component as fig. 14 (1134 nodes, 1233 ties). Colour is the community the entry's own evidence settles — 203 European, 48 Tunisian, 477 uncoded. The 48 Tunisians are not peripheral: their mean betweenness (0.008) exceeds the Europeans' (0.008), and they too sit in the community's own bodies — the 8 with the most Tunisian members are named.

- Community not settled by the entry (477)
- European (203)
- Tunisian (48)
- Association or public body (406)
