

Tunisian notables sit inside the network, not on its rim

The same largest component as fig. 14 (1116 nodes, 1216 ties). Colour is the community the entry's own evidence settles — 215 European, 49 Tunisian, 459 uncoded. The 49 Tunisians are not peripheral: their mean betweenness (0.009) exceeds the Europeans' (0.008), and they too sit in the community's own bodies — the 8 with the most Tunisian members are named.

- Community not settled by the entry (459)
- European (215)
- Tunisian (49)
- Association or public body (393)
