

Brokerage is far more concentrated than membership

Largest component of the two-mode affiliation network: 1069 nodes, 1155 ties. Area is betweenness, on a linear scale, so it reads as share of shortest paths brokered. 690 of the 1069 nodes (65%) sit on no shortest path at all and are drawn at the floor size. The 10 highest that could be labelled clear are named — note Gounot (André), the highest-scoring person in the network, on only 9 ties.

- Person (699)
- Association or public body (370)
