

The associations interlock through one shared member at a time

Two bodies are tied when at least one person belongs to both. 493 bodies carry 1014 such ties, and the largest component holds 370 of them. Only 31 of those ties rest on more than a single shared person, and none on more than three — this is an elite joined by individuals holding two posts, not by institutions with overlapping benches. The 5 bodies with the most interlocks are named.
