

Natives sit inside the network, in clumps rather than on the rim

The co-membership giant component (747 people), coloured by side of the colonial line and sized by betweenness. 261 of these people are placed at all; the grey are the ones fig. 54 could not reach, and they are not a neutral background — some are natives. Nothing here looks like a native periphery: the orange sits among the blue, which is what figs. 56 and 57 measure. What the eye does pick up is the clumping that fig. 62 tests — orange tends to appear beside orange. The 6 natives who broker most are named.
