

The volume gives both sides the same space on the page

Entry length and portraits, for everyone the coding places. Mean length differs by 64 characters ($p = 0.399$) on means of about 700, and the shape of the two distributions is the same; the portrait share differs by 1 points ($p = 0.821$). Lambert allotted a native notable what he allotted a colonist. That is a finding about the editing of this volume and not about the society it describes: the people in it are already the ones he chose to print, and figs. 54 and 55 are about who that leaves out.

Entry length, in characters
