

Tunisian notables sit inside the network, not on its rim

The same largest component as fig. 14 (1134 nodes, 1233 ties). Colour is the community the entry's own evidence settles — 199 European, 56 Tunisian, 473 uncoded. The 56 Tunisians are not peripheral: their mean betweenness (0.010) exceeds the Europeans' (0.008), and they too sit in the community's own bodies — the 8 with the most Tunisian members are named.

- Community not settled by the entry (473)
- European (199)
- Tunisian (56)
- Association or public body (406)
