

Tunisian notables sit inside the network, not on its rim

The same largest component as fig. 14 (1116 nodes, 1214 ties). Colour is the community the entry's own evidence settles — 206 European, 47 Tunisian, 470 uncoded. The 47 Tunisians are not peripheral: their mean betweenness (0.009) exceeds the Europeans' (0.008), and they too sit in the community's own bodies — the 8 with the most Tunisian members are named.

- Community not settled by the entry (470)
- European (206)
- Tunisian (47)
- Association or public body (393)
